

GGS Coir Log

GGS Coir Sediment Control Log is composed of a 100% Coir Fibers confined by a biodegradable net to form a log of a specific diameter. The biodegradable netting is hand knotted at distances of 1.75" x 2.15" to maintain the shape of the log. GGS Coir Logs are designed to reduce hydraulic energy and filter sediment laden flow in channels and on slopes. The logs are flexible to conform to the soil surface and are secured by staking. Coir degrades over a period of over 2 years. GGS Coir Log meets or exceeds the physical property values listed below:

Diameter	Per 10 Ft Length
9 inch	7 lbs/ cu ft
12 inch	9 lbs/cu ft
16 inch	12 lbs/ cu ft

Composition and Netting	
Fiber Composition	Coir Coconut Matrix
Netting	Tubular Coir Mesh
Configuration	Cylindrical with Hog Ringed or Tied Ends
