

Gro-Green Wood Fiber Blend with Tackifier

Gro-Green Wood Fiber Mulch is manufactured from 70% virgin hardwood chips blended with 30% high quality post-consumer recycled cellulose fiber. Our hydromulch has excellent color retention (green dye), consistency and coverage characteristics. Gro-Green Wood Fiber Blend delivers increased performance and erosion control by strongly bonding seed, fiber and soil together, a perfect choice for residential, commercial and DOT applications. Contains Tackifier. Our Tackifier is specifically formulated polymer that binds hydromulch fibers to the soil. Tackifier should reduce the friction of the slurry in your hose and tank and may improve your shooting distance. Tackifier is designed to increase water holding capacity and improve seed germination

Rate	Slope
1500 lbs/Acre	Moderate
2000 lbs/Acre	3:1 to 2:1
2500 lbs/Acre	Greater than 2:1

Moisture Content	12% (+/-3%)
Toxicity	Non-Toxic
Water Holding Capacity	1200% Minimum
